

Bespoke Hybrid Cloud Solutions
World-Class Service
On-Premise ~ Multi-Cloud ~ Your Choice

A new era in world sport will get underway in the summer of 2018 as Glasgow hosts the inaugural European Championships - an exciting new multi-sport event which brings together some of the continent's leading sports, including the existing European Championships for Aquatics, Cycling, Gymnastics, Rowing and Triathlon, along with a new Golf Team Championships.

Official Networks and Network Integration Services Supporter

NVT Group is proud to play an integral role in the delivery of the Glasgow 2018 European Championships, by providing a host of network design, consultancy and connectivity services. Working across the six sports hosted in Scotland, we will also co-ordinate the delivery of technology services and oversee network design, architecture and information security services.

At the foundation of NVT Group's entire engagement at Glasgow 2018 will be ViiA

ViiA will be the key solution that provides the technology infrastructure required to stage the Glasgow 2018 European Championships across all competition and non-competition venues in Scotland. Specifically for Glasgow 2018, each venue will be serviced by an on-site **ViiA** appliance - the same solution which is now available to you in your business, should a **ViiA** on-site solution be the best approach for you.

Proven flexibility and scalability

ViiA is special, but the technology principles we are applying at Glasgow 2018 are no more special than those we can apply to your business environment.

ViiA's deployment at the Glasgow 2018 European Championships is proof of the technology's flexibility and scalability. Indeed, the beauty of **ViiA** is that a bespoke solution can be designed for every business case, no matter its size and shape.

In short, how we deploy **ViiA** for your business depends on *you* - but the best practice which underpins the solution is the same across the board.
