

LET'S WORK TOGETHER

Innovative technology solutions for the third sector,
exclusively from NVT Group

www.nvtgroup.co.uk

Take a look at our services for the third sector

NVT Group is your leading provider of IT infrastructure, connectivity, network monitoring and cyber defence solutions

Innovative solutions working together to bring you valuable benefits

Over thirty years, NVT Group has built a solid reputation as a first-class provider of ICT services and solutions to the public, private and third sectors in Scotland. Today, we still operate from our Scottish HQ, where we provide an innovative suite of technology solutions, all of which provide benefits to organisations in the third sector. Our clients include **Partners for Inclusion Group**, **ENABLE Scotland**, **Scottish Opera** and **St Columba's Hospice**.

Read on to find out about **Viia**, our cloud services platform, which has been created especially for the third sector. You can also find out about our **Aiir** connectivity services, our exclusive **Concepta** network monitoring technology and our bespoke cyber defence services from **Blue Rock**.

Let's work together on INFRASTRUCTURE

Viia has been designed by NVT Group technologists as a reliable, secure, affordable and scalable **cloud services platform**. It provides you with the means to migrate to a cloud based ICT infrastructure without having to endure the challenges that are typically associated with it.

Viia provides everything you expect from cloud

Viia is similar to other cloud offerings, in that it provides all the benefits of cloud computing, including:

- Better control of your costs by ensuring that you only pay for the IT resources you actually use
- Future proofing your organisation with automatic system and software updates
- Keeping your organisation more secure with an improved disaster recovery strategy

Viia also provides benefits you don't normally expect from cloud

Viia is different to other clouds because its architecture model can make adoption costs more affordable than traditional cloud offerings. **Further savings can be achieved when third sector organisations elect to share resources in the data centre.**

The **Viia** platform is so flexible that it enables you to take appropriate steps to the cloud, at a pace which suits your organisation's needs first and foremost, i.e. no more "do everything or nothing" scenarios. With **Viia**, you are in complete control.

To assist with GDPR compliance, **Viia** servers are based only in the UK, which means that your data is guaranteed to never leave the United Kingdom.

Viia also comes with **full support from NVT Group**, so you can be assured that your journey *to the cloud* - as well as your experience *in the cloud* - will be as trouble-free as possible.

The route to the cloud is challenging...

Typically, organisations are faced with multiple challenges when they migrate to the cloud, including:

- Choosing the best cloud solution for their needs
- Determining accurate costs
- Adopting an effective migration strategy
- Updating company processes
- Redefining security needs
- Connecting legacy systems
- Protecting their data

...which makes Viia the best 'way to go' there

Viia aims to overcome such challenges by providing an effective pathway to the cloud.

Viia integrates with all major public cloud platforms (e.g. AWS, Google Cloud or Microsoft Azure) and your on-premise hypervisor technologies (e.g. VMware or Microsoft's Hyper-V).

Why Viia is the best cloud solution for the third sector

Viia provides the right combination of *on-premise* and *in-cloud* infrastructure to meet your requirements and adapts the balance as your needs and preferences change so you complete your journey entirely at your own pace and with our support at every step. You can add extra resource when you need it and you can scale *down* as well as up, so you never end up paying for resources you don't need.

Viia simplifies the journey to and in the cloud for third sector organisations, reducing cost and complexity while delivering secure, flexible and robust ICT services.

A summary of Viia's benefits

- **Reduced adoption costs**, compared to other cloud offerings on the market
- Share resources in the data centre with other charitable organisations to **reduce costs even further**
- **Viia's flexibility and scalability** allows your organisation to **take appropriate steps when migrating to the cloud**
- **No costs for ingress or egress data**, *guaranteed*
- **Improve your GDPR compliance** by best protecting your data and guaranteeing its sovereignty, with **Viia's UK based data centres**
- **Viia's highly predictable service** reduces risk and offers best value for money
- **Support from NVT Group** comes as standard
- Network wellness reporting is provided by our **exclusive Concepta technology**

Let's work together on CONNECTIVITY

Aiir is the all-inclusive business connectivity solution from NVT Group.

With **Aiir**, you pay a pre-agreed fixed price per month and we provide everything you need to get connected, including all the necessary hardware and software. We then provide proactive monitoring to make sure your organisation *stays* connected.

Aiir is also the perfect solution for organisations that are looking to provide wireless connectivity to their clients and guests. For a pre-agreed price per month, we will ensure that people can connect to a reliable, high speed, wi-fi signal on your premises.

The prospect of superfast broadband, regardless of your location, is finally here! If you would like to find out more about getting connected, call us on **01698 749000**.

Let's work together on NETWORK WELLNESS REPORTING

Concepta is an interface which reviews and collects health information from monitored IT systems and presents the status of each system using a heads-up Red-Amber-Green traffic light display.

Concepta reports on three key measurables which can negatively affect your operations. These are: **Security, Capacity** and **Performance**. The instant that **Concepta** detects a problem in any of these key areas, it alerts you to the exact specifics of the issue in its exact location.

Concepta can integrate contextual information such as production schedules, traffic information, shift rotas and more into the display, to enhance decision making and to help prioritise actions.

Concepta delivers real-time, contextual and highly visual data and analytics, which allows you to make better decisions, more quickly and more often. This helps you to improve the service you provide, reduce your risk and save money.

With **Concepta** you no longer have to guess the health of your network - *you just know*.

Concepta is available to you *exclusively from NVT Group*. Get in touch with us to see examples of **Concepta** in use at some of the most complex and challenging technology environments and to find out more about how it can benefit you in your organisation.

Let's work together on CYBER SECURITY

concepta security services

Concepta Security Services is a suite of cyber security solutions which, when applied synchronously, provide you with peace of mind about your IT network's security status. **Concepta Security Services** monitors key systems and provides real time actionable alerts.

Concepta Security Services is available at three levels of protection, i.e. *Essentials, Advanced & Complete*. Contact us to find out which is most appropriate for your organisation.

Blue Rock - Let's get serious about P4\$\$w0rds!

We believe that a **strong password policy** is one of the foundations of **strong cyber defence**. Our **Blue Rock** solutions aim to make life as difficult as possible for hackers and other crooks, by ensuring your passwords are more difficult to crack. This, in turn, makes your organisation less susceptible to attacks and reduces your risk of experiencing a data breach.

The **Blue Rock** approach uses **cyber awareness training, ethical hacking techniques** and **regular auditing** to make sure that your organisation stays a less appealing target for cyber criminals.

Talk to us to discover how your organisation can stay one step ahead of cyber crime.
