# NVT

**GROUP**

Technology Services Integrator

**Introducing Viia, the ICT infrastructure solution you configure exactly as you require, provided as a service.**

viia

# With Viia, 'Infrastructure as Required' is finally here.

**Viia offers you the means to configure your ICT infrastructure to your exact requirements, with cloud and on-premise options and total integration with any existing technologies.**

**At last, there is a platform which gives you the freedom to create an IT infrastructure that suits your needs first and foremost.**

**Viia** offers you an end to end 'Infrastructure as Required' platform that can be configured to meet the most bespoke business demands.

**Viia** can be deployed to or within any environment and modified as your business evolves and your requirements change.

**Viia** is deployed as a 'best fit' solution and utilises OpenStack and Open Source technologies, thus becoming a platform which is unconstrained by the commercial demands of typical vendor solutions.

This enables you to adapt the platform as and when you require, so that you can take advantage of new technologies, drive innovation and reduce costs.

## Viia is the 'way to go'.

The benefits of moving towards a pay as you go and scale as you grow infrastructure solution are well publicised. So, chances are you are considering a move to the cloud or you may even have started the journey already. But are you being forced to go in a direction which doesn't take into account your business needs?

**Viia** aims to overcome such challenges by providing an effective and flexible pathway to the cloud, enabling you to get there in a way which is right for you.

**Viia** integrates easily with any existing cloud technologies (e.g. vmware or Microsoft's Hyper-V) your organisation may already have adopted. **Viia** also integrates with all major public cloud platforms such as Amazon Web Services (AWS) and Microsoft Azure, as well as your *on-premise* technologies.

### The route to the cloud is challenging.

Typically, organisations are faced with multiple challenges when they migrate to the cloud, including:

- Choosing the best solution for their needs
- Determining accurate costs
- Adopting an effective migration strategy
- Updating company processes
- Redefining security needs
- Connecting legacy systems
- Protecting their data

### In-cloud or on-premise, or both?

**Viia** provides the right combination of *on-premise* and *in-cloud* infrastructure as you require it and adapts the balance as your needs and preferences change. **Viia** delivers advanced storage, compute, networking and security features in a unified platform with full support from NVT Group.

**Viia simplifies the journey to and in the cloud, reducing cost and complexity while delivering secure, flexible and robust ICT services.**

# With Viia, it's Infrastructure your way, or no way.

**The Viia platform is ready to use the moment it's deployed. Plus, Viia offers complete control over workload placement and data movement.**

**Viia** has been designed by NVT Group technologists to **be flexible**, **reliable**, **easy to use** and, most of all, *to support your business better*.
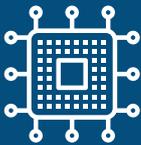

**Viia** offers you an enterprise-class infrastructure platform, packaged with world-class service standards and unrivalled economics.

Using **Viia** to manage the placement of your workloads is fast and instinctive.

Never forget that with **Viia**, you can be the master of your own infrastructure. It is indeed *your infrastructure, your way*. **Viia** offers the power to create a solution which is smarter, more agile, more efficient and in line with your operational needs.

## Viia standard features include:

**Compute**

**Networking**

**Storage**

**Software Licencing**

**Data Protection**

**Monitoring & Support**

## The 'free data movement' movement starts here.

**NO MORE DATA MOVEMENT CHARGES**

Other cloud platform vendors will typically charge you for *ingress* and *egress* data, i.e. the data that you move into and out of the cloud. These charges are normally levied using a tiered pricing structure, so the amount you will be billed can be difficult to forecast.

With **Viia**, on the other hand, ingress and egress data charges are much easier to calculate because **THERE AREN'T ANY.**

**With Viia, you decide where your data resides and we don't charge you more for the privilege of moving it if you need to.**

# Four ways in which Viia supports your ICT requirements.

**Scale up and scale down, whenever you need to.**
**Viia** allows you to bolt-on extra resource as and when you need it. That means you don't pay for extra networking, compute and storage before it is necessary - even if your requirement is only temporary. With **Viia** you can scale down as well as up, so you never end up paying for resources you don't need.

**Cloud Hosted, On-Premise or Hybrid, it's up to you.**
If your business will benefit from an on-premise solution, **Viia** is for you. If your business will benefit from a cloud hosted solution, **Viia** is for you. If your business requires a hybrid approach, **Viia** is for you.

**Improve your back up & Disaster Recovery.**
You can use **Viia** as an effective back up solution, where your data will be held securely in our UK based data centres. Should any type of disaster happen, you can assure business continuity with quick recovery of your data and applications.

**Staying in control of your migration to the cloud.**
It's worth remembering that **Viia**'s unparalleled flexibility allows you to take appropriate steps to the cloud, at a pace which suits your business needs first and foremost, i.e. no more "do everything or nothing" scenarios. With **Viia**, you are in complete control.

## A summary of the benefits...

- A platform which gives you the freedom to create an **ICT infrastructure exactly as you require it** with both cloud and on-premise options
- **Provided as a service** with all associated benefits including **moving to an OpEx financial model**
- **Viia's flexibility and scalability** allows your organisation to **stay in control when migrating to the cloud**
- **No costs for ingress or egress data**, *guaranteed*
- **Improve your GDPR compliance** by best protecting your data and guaranteeing its sovereignty, with **Viia**'s **UK based data centres**
- **Viia**'s **highly predictable service** reduces risk and offers best value for money
- **Support from NVT Group** comes as standard
- **Network wellness monitoring** is provided by our **exclusive Concepta technology**
